StockWise

Snap the delivery. Never run out.

AI-assisted inventory for small businesses — simple enough to use with no training.

ERROR 303 · SDG 9 Industry, Innovation & Infrastructure

Stock still runs on paper and guesswork

Meet Aisyah. She runs a supply shop with two staff. Every day she asks: what do I have, what came in or went out, and what must I reorder?

Typing every delivery

Staff copy each line of a supplier's delivery order into a spreadsheet — about 10 minutes a delivery, with typos and missed items.

Running out mid-job

A fixed "minimum stock" ignores how fast items sell and how long suppliers take. Stock runs out, work stalls, rush buying costs more.

No record of moves

Paper logs and recounts can't show who moved stock or when — so losses and errors go unexplained.

A huge market big systems ignore

1.1 million
MSMEs in Malaysia — 96.9% of all businesses

48.7%
of national employment (8.09 million people)

39.7%
of GDP — RM689.8 billion in 2025

Our user: micro & small firms (98.2% of MSMEs). Hardware shops, workshops and retailers with 1–20 staff, a phone, and no time for complex ERP software.

Sources: DOSM, MSMEs Performance 2025; SME Corp Malaysia, MSME profile (2023 establishments).

Three taps instead of three headaches

AI

Snap Delivery Note

Photograph the supplier's invoice. AI reads every line and adds all items in one tap — after staff confirm.

AI-assisted

Reorder before it runs out

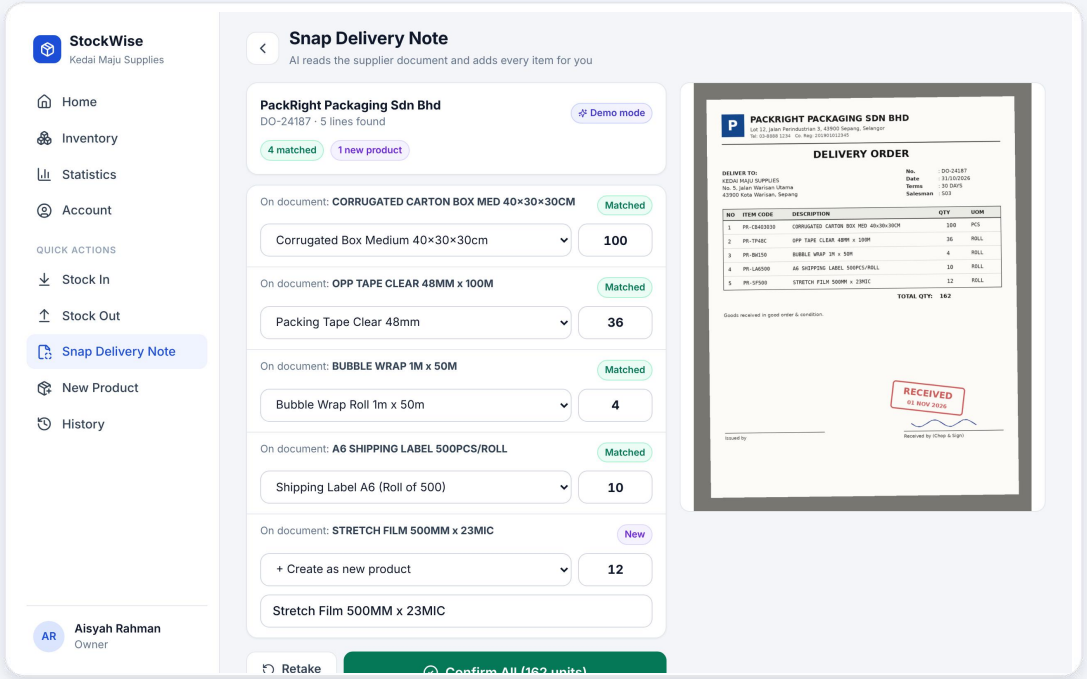

"Gloves: ~4 days left." StockWise learns usage and supplier delivery time, then drafts the WhatsApp reorder.

Built in

Oldest stock first + full log

Every delivery is a dated batch. Stock-out tells staff which batch to pick, and every action is logged with name and time.

One photo adds every item

1 Snap

Take a photo of the delivery order or invoice.

2 AI reads & matches

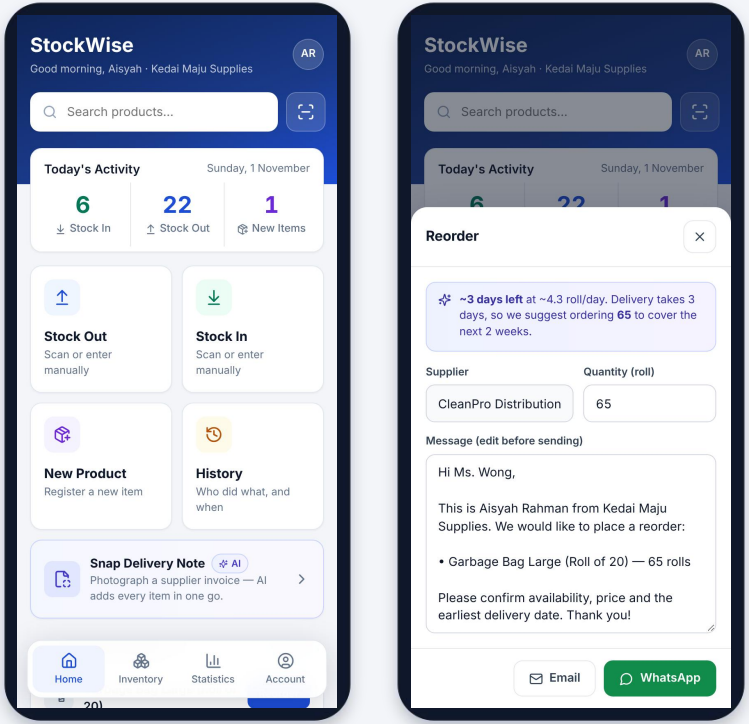

Lines are matched to your products: Matched, Check or New.

3 Confirm all

Staff review, then one tap adds every batch.

~10 min → under 1 min per delivery (team estimate)

Alerts before you run out, reorder in one tap

Learns real usage

Average daily use from the last 14 days predicts "days left".

Knows delivery time

Alerts when stock will run out before a new delivery could arrive.

Drafts the reorder

Supplier, quantity and message ready — owner edits and sends on WhatsApp or email.

Oldest stock first, every move on record

Scan to record

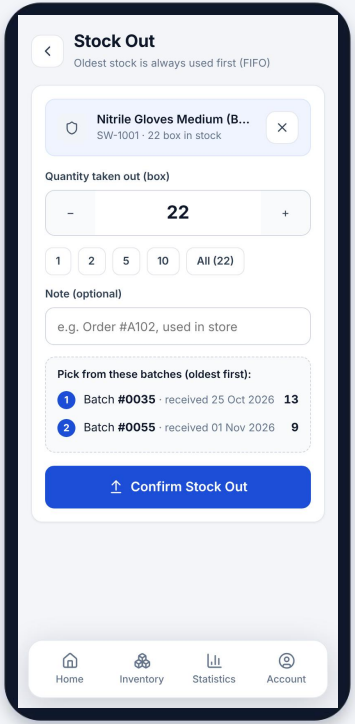

Phone camera scans QR or barcodes. Big buttons, plain words, no training.

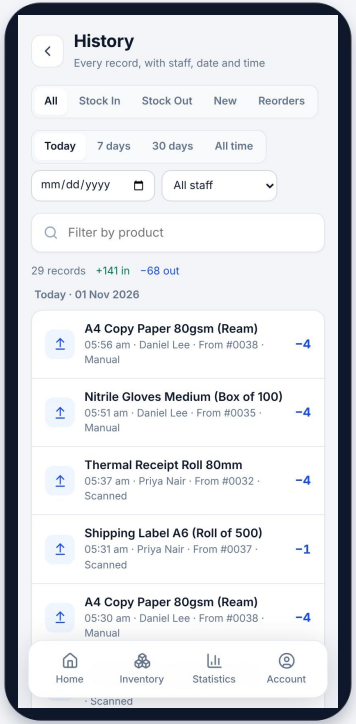

First in, first out

Each delivery is a dated batch. Stock-out shows exactly which batch to pick.

Activity log

Who did what, when — filter by date, staff, product or type.

Live demo: from trigger to outcome

1

Trigger

Staff scan a stock-out of gloves

2

Connected data

Batches, usage, supplier & delivery time

3

Decision

"~4 days left" — order 95 boxes

4

Human approval

Owner approves reorder; staff confirm AI lines

5

Outcome

Batches added, alert clears, log updated

6

Scale

Live sync on every device via Supabase

Backup: three sample delivery notes run fully offline in Demo Mode.

The benefit, measured

90%

less time receiving each delivery (10 min → under 1 min)

Days

of warning before an item runs out, based on usage and delivery time

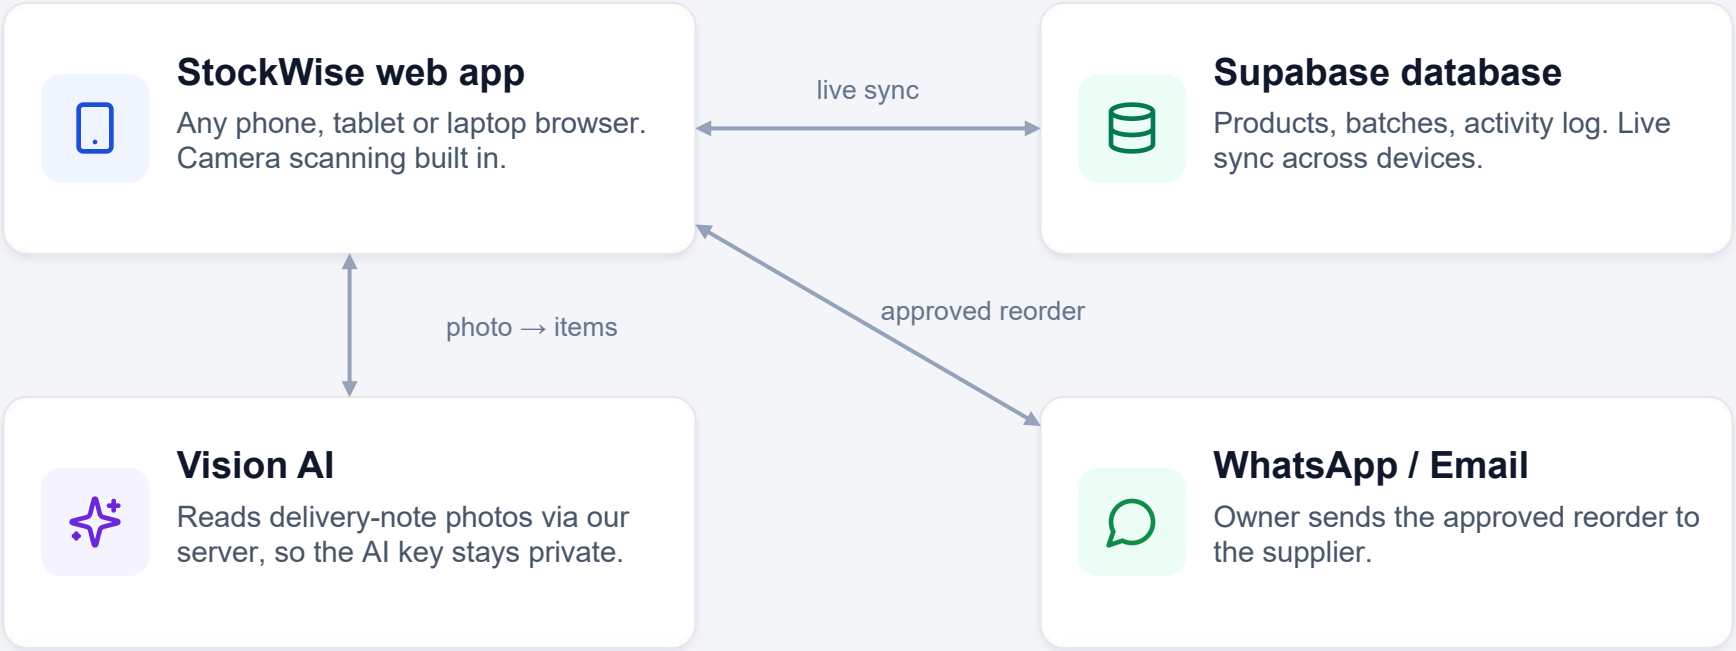

100%

of stock moves logged with staff name, date and time

SDG 9: brings digital tools and AI to micro and small firms. **SDG 8:** more productive work, less manual data entry.

Time saving and warning period are team estimates from the demo data; to be validated in pilots.

How it works

StockWise web app
Any phone, tablet or laptop browser. Camera scanning built in.
live sync
Supabase database
Products, batches, activity log. Live sync across devices.
photo → items
approved reorder
Vision AI
Reads delivery-note photos via our server, so the AI key stays private.
WhatsApp / Email
Owner sends the approved reorder to the supplier.

Business model and roadmap

Proposed pricing

Free
1 shop, up to 50 products, manual entry

Pro — RM29 / month
Unlimited products and staff, Snap Delivery Note, smart reorder, live sync

Channel
Hardware-shop associations and supplier partners

Now

Working MVP: AI snap, smart reorder, FIFO, activity log, live sync

3 months

Pilot with 5 local shops; QR label printing; CSV import

12 months

Secure logins, multi-branch, owner approval inbox, supplier ordering portal
